***Allowable Subject Matter***

1. **Claims 1-35 are allowed.**

The following is an examiner's statement of reasons for allowance:

The present invention relates to a high-frequency module and a radio communication apparatus. More particularly, the present invention relates to a high-frequency module which is suitable for a multi-band mobile radio terminal and on which there are mounted power amplifiers, switch circuits, a diplexer, directional couplers, an auto power controller and the like, and also to a radio communication apparatus having such a high-frequency module mounted thereon.

The instant application is directed to an non-obvious improvement over the invention described in Pat. No. 6,683,512 to Nakamata et al. The improvement resides in a diplexer connected to the antenna terminal for branching a plurality of transmission/reception systems different in pass band from one another; switch circuits connected to the diplexer for switching the transmission/reception systems to transmission systems and reception systems; power amplifiers connected to the switch circuits for amplifying transmission signals in the pass bands of the transmission systems; and matching circuits for matching the impedances of the power amplifiers to one another, the power amplifiers and the switch circuits respectively being formed by high-frequency semiconductor integrated circuit elements, and these high-frequency

semiconductor integrated circuit elements being mounted on the surface of the multi-layer substrate.

**Claims 2-35** are allowed by virtue of their dependency on claim 1.

### ***Conclusion***
